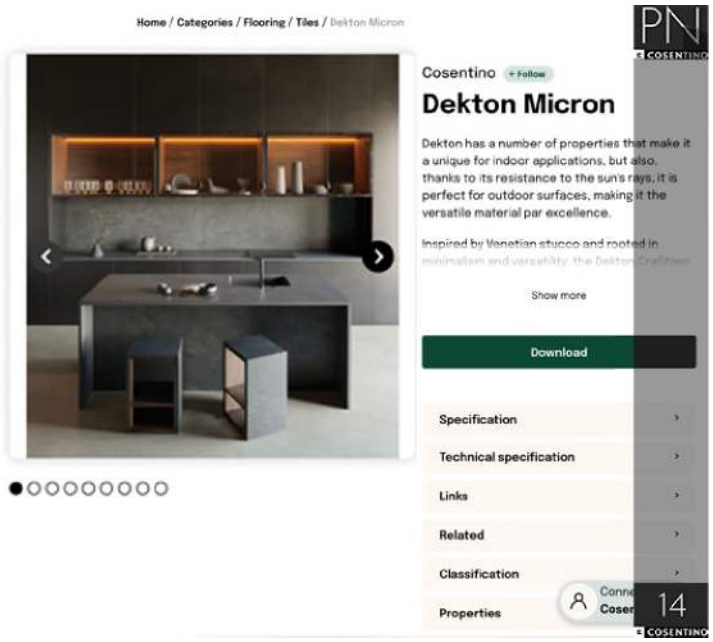
PN14 | Update of the BIM colour libraries



Dear colleagues,

As part of Cosentino's digital tools, we are present on the BIMObject.com platform with a set of color libraries and BIM objects.

We already have available the new Kraftizen series of Dekton and we are working on updating the most recent collections.

You can find the color libraries in .adsklib format for Revit. Applied on a wall facing and on a floor in .rvt format for Revit 2022. Also other relevant information on the web sites of:

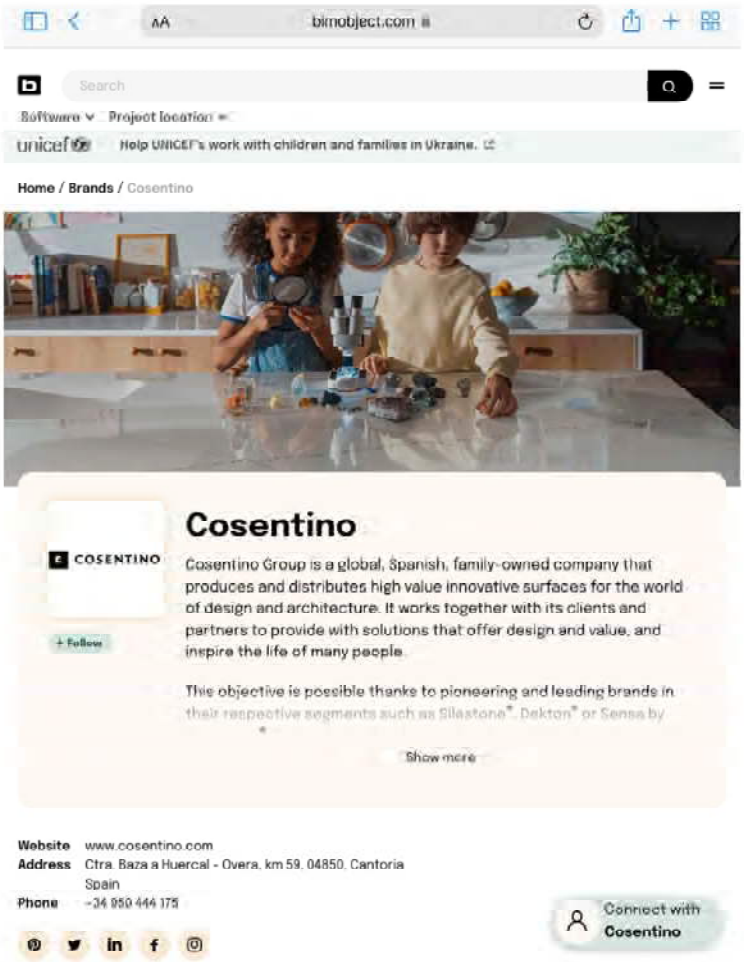
https://www.bimobject.com/es/cosentino
and within each of the color pages at:

https://www.cosentino.com/colors/dekton/
Yours sincerely,

Product Dept.

PN14 | Update of the BIM colour libraries

By **intranetnews** 8 June, 2022



BIM (Building Information Modelling) is a collaborative work methodology used in the creation and management of construction projects. The objective is to centralise all the project information in a digital model created and used by all the agents.

In the BIM model, in addition to the geometry of the project, construction elements and the documentation derived from it (plans, details, 3D views...), planning, cost estimation, environmental and energy efficiency, and maintenance information can also be integrated. This is achieved through interconnectivity between multiple softwares.

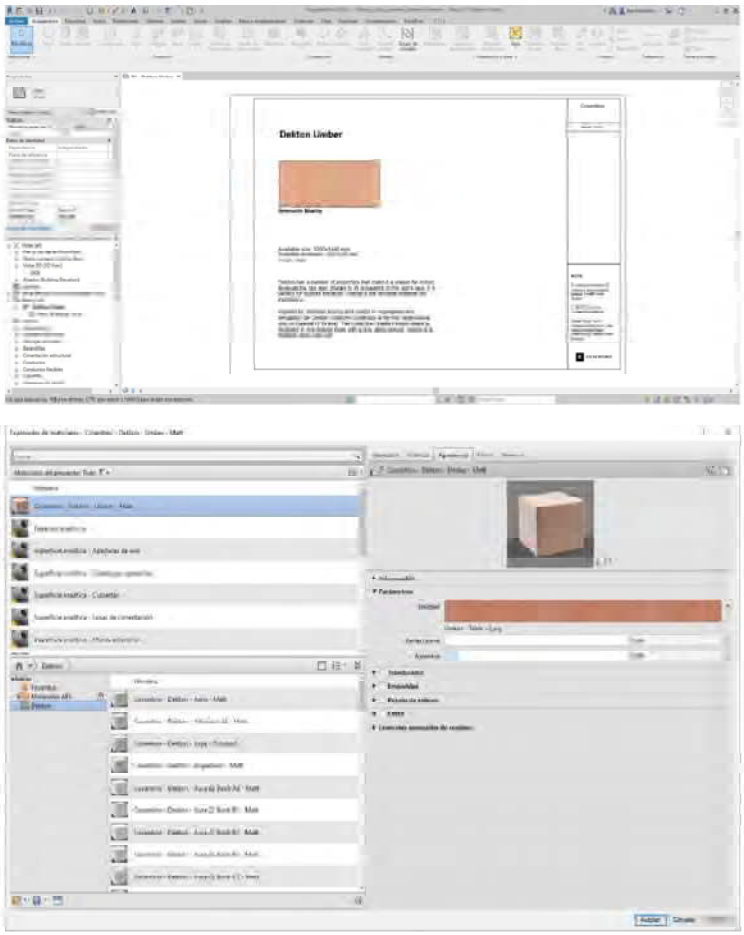
Product Department



Cosentino provides BIM objects both in the individual colour section of its website and on the BIMObject.com platform. In the former, it is not necessary to register, in the latter it is, but in a very easy way and free of charge.
